

ModelBuilder—Advanced Techniques

Goals of the workshop

- Highlight advanced features of ModelBuilder.
- Show how to integrate models with other models.

Major topics covered

- Using lists.
- Using model iteration.
- Using feedback.
- Controlling the flow of the model.
- Conditional calculations.
- Using in-line variables.
- Setting filters on model parameters.
- Setting symbology on model parameters.
- Using one model in another.
- Using geoprocessing services in models.
- Integrating other external models.
